NEMATODE-EXTRACTED SERINE PROTEASE
INHIBITORS AND ANTICOAGULANT PROTEINS

Abstract

Proteins which have activity as anticoagulants and/or
10 serine protease inhibitors and have at least one NAP
domain and are described. Certain of these proteins have
factor Xa inhibitory activity and others have activity as
inhibitors of factor VIIa/TF. These proteins can be
isolated from natural sources as nematodes, chemically
15 synthesized or made by recombinant methods using various
DNA expression systems.
